VOLUNTEER EXPERIENCE

Sangkran Techno

- Position: Member - Entertainment and Stage Team
 - Manage audiences
 - Create fun activities
- Position: Assistance - Performance Team
 - Manage performers
 - Taking care of performers

April 2024

March 2025

SKILLS

- Soft Skills
 - Adaptability
 - Teamwork
 - Creativity
- Technical Skills
 - Programming Language: Java, JavaScript
 - Front-end Frameworks: VueJs - Intermediate
 - Back-end Frameworks: Springboot - Beginner, NestJs - Beginner
- Other Skills
 - Editing Video: Capcut

LANGUAGE

- Khmer: Native
- Chinese: Intermediate
- English: Intermediate

EDUCATION

Institute of Technology of Cambodia

2023 - Present

- Department: Information and Communication Engineer

BakTouk HighSchool

2016 - 2022

PROJECT

- **School Supply E-Commerce**
 - **Tech:** Vue.js, Tailwind CSS, Spring Boot, MongoDB, JWT, Git, Figma

- **Description:** A full-stack e-commerce web application for purchasing school supplies online.
 - Designed and developed a responsive frontend using Vue.js and Tailwind CSS
 - Built RESTful backend APIs with Spring Boot for authentication, products, carts, and orders
 - Implemented secure user authentication and role-based access using JWT
 - Developed core e-commerce features: product browsing, search, cart, checkout, order history, and reviews
 - Created admin dashboard for managing users, products, orders, and reviews
 - Designed database schema and integrated MongoDB for scalable data storage
 - Collaborated in a 5-member team using Git for version control and Figma for UI design
- **Github:** <https://github.com/E-Commerce-School-Supply>
- **Smart Bin**
 - **Tech:** Vue.js, Tailwind CSS, NestJS, MongoDB, MQTT (HiveMQ), WebSocket, ESP32
 - **Description:** An IoT-based smart waste management system with real-time monitoring on web application.
 - Developed a web application for users and admins to monitor trash bin status in real time
 - Built backend services using NestJS to receive, process, and store IoT data
 - Implemented real-time data visualization using WebSocket for live bin level updates
 - Integrated MQTT (HiveMQ) for communication between ESP32 devices and backend server
 - Designed and connected MongoDB cloud database for sensor data, users, and system logs
 - Implemented role-based access for users and super-admins
 - Added Telegram Bot notifications to alert cleaners when bins are full
 - Collaborated in a team to design system architecture combining hardware, backend, and web UI.
 - **Github:** <https://github.com/SmartBin-Project>
 - **Demo:** <https://smartbin.gic26.tech>

AWARDS

- E-Gen Competition - First Place (2025)
